To Whom It May Concern

I am writing this recommendation for Dani Samer Assi, who recently was granted a Bachelor's degree in Biomedical Engineering at the Lodz University of Technology (TUL), Poland.

I have known Mr Assi for about 4 years. I had a pleasure to have him actively participating in my lectures/labs on Algorithms and Data Structures and to discuss a number of biomedical-engineering topics beyond the course material. I was a supervisor to his Final Project on design and construction of a human hand phantom controlled by a microprocessor, which was assessed as excellent. During his studies at TUL he demonstrated a genuine eagerness to pursue extra research projects in the area of biomedical engineering. He was a very active member of a students' science club. I rate his performance and activity as excellent. Dani Assi is definitely is a mature person, with a clear comprehension of his career purpose.

I have no doubts Dani Assi has a great potential to undertake and complete studies at the Master level. He has a general knowledge in math, science and engineering. He is persistent and efficient in gathering new information and is not afraid of approaching professionals to ask questions. He is very well organized, shows high level of intellectual integrity and has great interpersonal skills. While with TUL, he was a hard-working and very effective student. I strongly believe, he is an excellent candidate for graduate study at the Chinese University of Hong Kong.

Sincerely Yours,

Professor Andrzej Materka DSc PhD MSEE
